

World has wrong knowledge about rotation of the Sun!

World challenged (2007) for its wrong knowledge existing from centuries.

How does the Sun rotate?

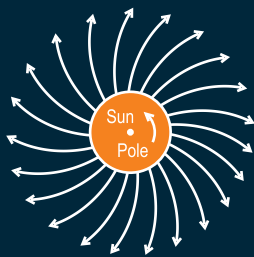

A new scientific true reason discovered and claimed (2007) over rotation of the Sun based over discovered (understood) unique materialistic particle properties of the rays by the Citizen Scientist Ramesh Varma (INDIA)

Sun does not seem to be rotating but it rotates differently; not like a solid planet.

True reason behind rotation of the Sun (star):

Sun does not rotate by the conservation of angular momentum which it had got at its formation from the rotating nebula due to its contraction towards its centre by its gravity as the World understands. Conserved angular momentum got if any by the Sun from the rotating Solar Nebula has ceased billions of years ago due to the friction from the surrounding space (white matter) and from its own gassy matter due to different rotation speeds of its every particle/shell besides some other factors as stated ahead.

In the Newton's era it was a speculated scientific thought (understanding) but now in the 21st century what the Scientists have explored new in the past 400 years, said understanding has now become unscientific and rubbish but it still persists due to the scientists' mind set.

Outgoing materialistic particles curved rays of the Sun as seen from above the Pole.

Now truly, Sun (star) rotates over its axis by the back thrust over its every particle from the Sun's outgoing materialistic spherical particles curved rays along with other solar ejects. (Back thrust is as per the Newton's third law over the motion of the objects that action and reaction is equal and opposite.)

Very important note: Some unique features of the Sun, like perfect spherical shape in spite of its faster rotation; faster rotation speed at the equator and slower rotation speed near to its Poles causing friction with its every shell and some other features as stated ahead have supported the claim to prove (i) that Sun does not rotate by the conservation of angular momentum and (ii) Sun rotates by the back thrust from its outgoing materialistic particles curved rays along with other solar ejects.

Booklet Price: ₹ 40

What reason does the World understand for rotation of the Sun?

From centuries the Scientists, Astronomers and Science Concerned of the World understand that solar system has been formed from a vast rotating cloud of dust particles and gases called Nebula. Nebula collapsed towards its centre by its gravity. Due to contraction, Nebula got rotation and it rotated dramatically so fast that it transformed to a thin disc of vast diameter. From the central part of the rotating disc; Sun formed and from rest of the matter other solar objects have been formed.

Now the Sun is rotating from the rotation (conservation of angular momentum) which it has got at its formation. (In simple words, now the Sun is rotating automatic; presently there is no other force or mechanism that rotates the Sun).

Discovery claim goes beyond rotation of the Sun:

Before any explanation over rotation of the Sun, Concerned must know unique materialistic particle properties of the rays and something about discovered working mechanism of solar bodies based over understood materialistic particle properties of the rays.

Something about the rays:

Till date World has not been able to correctly understand most properties of the rays.

World understands that light has dual property of the wave and particle. But working mechanism of Solar System proves that light or any other kind of the ray has only one property that it is particle.

There is only one mode to correctly understand the property, which is as follows.

Mode to understand materialistic and physical properties of the rays:

Particle of the ray of light (or any other kind of the ray) besides being the fastest moving particle is also among the finest, lightest and of the rarest density form of the matter.

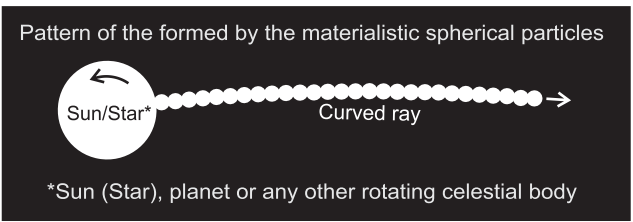

Due to the above said fact; human can't understand light correctly in any scientific laboratory or through any human made device. (Light does not have dual property of the wave and particle as the World understands but it has only one property that it is particle).

Further to understand a ray of light (or any other kind of the ray) and its true properties human cannot make such vast laboratory similar to solar system.

The only mode to understand true materialistic and physical properties of the rays and its particles is to visualize working mechanism of solar system by considering vast solar space as Nature's vast laboratory and solar celestial bodies as the scientific devices in it.

Phenomena occurring in the solar system by the solar objects are the same as the scientific result got by understanding a ray of light (or any rays) composed of closely touching materialistic spherical particles.

Such kind of the ray (i) On its propagation from a rotating celestial body does not adopt straight path but adopts a curved or spiral path. See the sketch.

For the purpose to understand working mechanism of the solar system or of the celestial bodies, outgoing materialistic particles rays from a rotating body have been understood as curved rays though after travelling long distance rays are noticeable as spiral.

Further (ii) Such kind of the ray on its escape from the celestial body puts back thrust over it under Newton's third law of motion that action and reaction is equal and opposite. Such kind of the ray (iii) On its strike over a body puts forward thrust over the striking body. Besides backward and forward thrust such kind of the ray (iv) also provides side push to the object which is in its way as stated over the website.

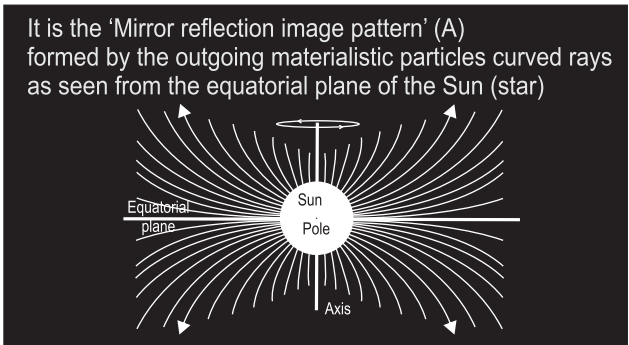

Moreover, there is another property of the materialistic spherical particles curved rays (v) which forms specific pattern over the rotating body; said pattern governs working mechanism of the solar system along with the factor 'gravity'.

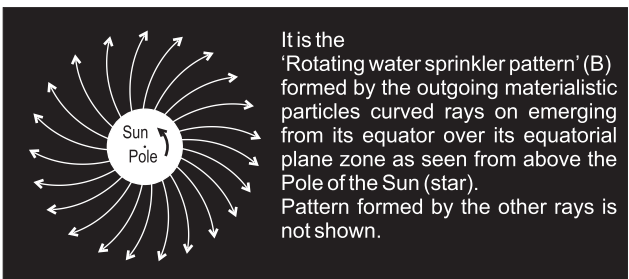

Factors which govern working mechanism of the celestial bodies (solar system or the Universe).

It is the thrust (forward and backward) and push factor by the materialistic spherical particles curved rays along with the pull factor by the 'gravity' which governs working mechanism of the celestial bodies. (Gravity is not the only factor which governs working mechanism of the celestial bodies as the World understands).

Materialistic spherical particles curved rays on their escape from a rotating celestial body (star, planet etc) form a specific pattern over it. See the sketch.

Outgoing materialistic spherical particle curved rays due to their back thrust provide rotation to the celestial body from which the rays escape and they also provide rotation to other bodies by striking over them. See the sketch

Besides rotation, the said pattern (B) of rays provides orbital motion by their side push. Further, Pattern (A) of the rays formed over the Sun keeps the solar family almost* over a plane passing through equator of the Sun and also the said pattern (A) of the rays formed over the planets have formed flat rings over some of the planets.

***Almost:** Why almost and why not perfectly over a plane? It is also due to the materialistic particles curved rays; see over the website.

Mapping of the outgoing electrons from the Sun by the NASA's cosmos

NASA's cosmos has mapped patterns of the outgoing electrons and magnetic field of the Sun; which are similar to the pattern formed by the outgoing materialistic particles curved rays emitted from the rotating body (Sun) as understood by the Challenger.

This information is taken from NASA's Cosmos website: https://ase.tufts.edu/cosmos/print_images.asp?id=28

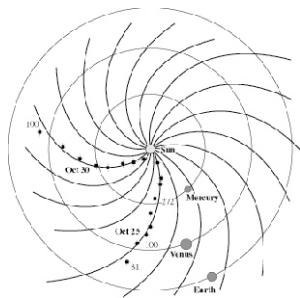

Pattern of the moving electrons as seen from above the Pole of the Sun is perfectly same as the pattern formed by the outgoing materialistic particles curved rays from the Sun as understood (visualized) by the Challenger.

By keeping in mind the pattern of movement of interplanetary electrons from the Pole of the Sun, if it is understood or visualized that what type of the pattern would be of the moving electrons if it is seen at its equator; it would be the same pattern as formed by the outgoing materialistic particles curved rays as understood by the Challenger.

Further, pattern of the materialistic spherical particle rays over the Sun due to its rotation, as understood by the Discovery Claimer, is also similar to coronal magnetism field mapping noticed by the NASA's Cosmos.

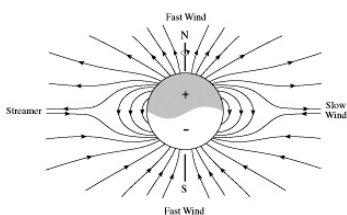

Spiral Path Of Interplanetary Electrons:

The trajectory of flare electrons in interplanetary space as viewed from above the Polar Regions using the Ulysses spacecraft.....
read website.

Coronal Magnetism at Minimum Activity:

(Pattern of the coronal magnetic field as viewed from equator of the Sun). Read website.....

Escaping water jets from the rotating garden water sprinkler adopt curved path.

Rotating garden water sprinkler as seen from above

In the jets of water, particles or molecules of the water are closely touching each other like particles of the materialistic rays. So, water sprinkler at the escape of water jets rotates the disc like the Sun and ejected water jets adopt curved path similar to the path adopted by the materialistic particles curved rays from the Sun.

Some additional scientific proofs (A, B, C and D) that Sun rotates by its outgoing materialistic particles curved rays.

(A) Sun does not rotate by the angular momentum as the World understands. Though it is not so but if it is presumed so, even then Sun can't rotate for long due to friction of every particle with the other because every particle of the Sun rotates at different speed.

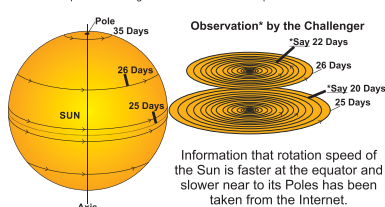

(B) Scientists have noticed that rotation speed over the equator is greater than near to its Poles.

In the Sun, every ring/circle formed of particles around the axis rotates with different speeds.

In the Sun, every ring/circle of particles of every slice parallel to its equatorial plane rotates with different speeds; faster rotation period (not linear speed) inside towards axis of rotation and slower rotation period of particles at the outer surface.

Further; average speed of rotation of the rings/circles of every slice is different. Average speed of the rings/circles of the slice at the equator is greater than average speed of the rings/circles of the slice near to the Pole.

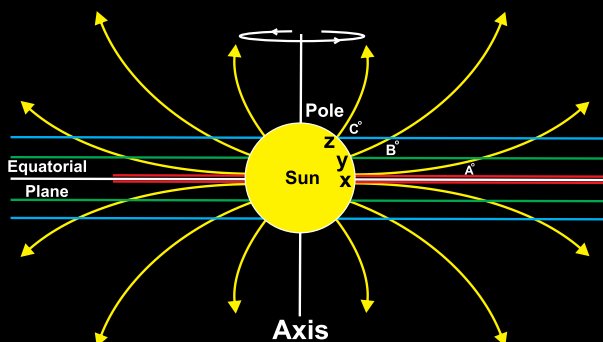

Scientists have noticed that surface matter of the Sun at the equator rotates faster than the surface matter near to its Pole and below is the observation by the Challenger over different speeds of the rings/circles of the slice at the equator and near to its Pole.

Source: https://www.nasa.gov/mission_pages/sunearth/science/solar-rotation.html

Discovery claimer has understood that it is due to variable back thrust by the outgoing materialistic particles curved rays because of variable angle of escape formed with the planes parallel to the equatorial plane. It is one of the scientific proofs that the Sun rotates by its rays .

Rotation speed of the Sun is faster at the equator than near to its Poles ?

Angle of escape formed by the rays over the plane parallel to the equatorial plane at point (x) is 'A' degree; at point (y) is 'B' degree and at point (z) is 'C' degree.

Angle 'A' nearer to the equator is much smaller than angle 'C' nearer to the Pole. Due to the fact (lesser the angle of escape by the rays; greater the back thrust), rotation speed at point (x) is faster than at point (z).

(C) Sun is a perfect sphere in spite of its fast rotation, why so?

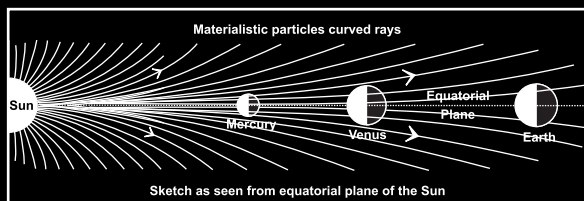

Answer to this further proves that Sun rotates due to the backward thrust of its outgoing materialistic particles curved rays. Outgoing materialistic spherical particles curved rays by their back thrust over every particle of the Sun keeps the shape of the Sun 'perfect sphere' and does not allow it to become oblate due to its fast rotation. Explanation is over the website. (Said phenomenon till date is a riddle for the World Scientists).

(D) When Sun has not become oblate due to its fast rotation (given) by the back thrust of outgoing rays) and it is still a perfect sphere, then how come solar nebula at its rotation transformed its shape to a thin disc of vast diameter?

Spherical shape of the Sun disapproves World's most prestigious understanding that solar system is over a flat plane due to the fast rotation of the Solar Nebula that resulted its shape to a thin disc of vast diameter. True reason is stated below.

Solar family is almost* over a plane passing through the equator of the Sun. Why so?

Mirror reflection image pattern formed over equatorial plane of the Sun by the outgoing materialistic particles curved rays from the Sun acts as trap zone to keep solar family over it.

Answer to this also proves that Sun rotates by the backward thrust of its outgoing materialistic particles curved rays. Outgoing materialistic particles curved rays from the Sun form mirror reflection image pattern over its equator plane. The said phenomenon forms a trap zone to keep the solar family over the plane. Had it been not so, scattered masses and other celestial objects formed by the collision or by clubbing would not be over the said plane but most of the solar objects would have had different orbital planes.

***Almost:** Why almost and why not perfectly over a plane? It is also due to the materialistic particles curved rays of the Sun and the object; see over the website.

Factors (A, B, C and D) already stated above have proved that Sun rotates by the back thrust from outgoing materialistic particles curved rays. An additional factor (E) stated below proves World's understanding wrong and false that the Sun* rotates by the conservation of angular momentum which it has got at its formation.

***Sun: Below stated illustration pertains to all spherical bodies like Stars, Planets, Satellites and Black Holes etc.**

It is true that huge matter of dust particles and gases like Nebula in space on its contraction towards its centre by its own gravity gets rotation but due to friction from the surrounding space matter (white matter) and tidal friction from the nearby objects contraction cannot provide rotation to the body forever and ever, as the World understands. Further, Sun (star) and gassy planets get friction (retardation) to their rotation speeds from their own gassy matter due to different rotation speeds of their every particle.

Explanation:

- Just, when compression starts towards its centre by the self gravity of a Nebula, it picks up rotation and simultaneously trapped finest form of the matter (**white matter***) in the form of independent particles and materialistic particles rays start escaping from the Nebula matter. The said escaping white matter on its escape starts providing torque force due to the back thrust at every particle of the Nebula to rotate the matter.

***White matter:** World understands that compactness (or compression) of the gassy matter (or say Nebula) generates (releases) 'energy' (heat/radiation) and according to the Scientists; 'energy' is not matter. Here the World is wrong. 'Energy' is not merely energy; it is a state of the matter in the form of electrons, independent charged/uncharged particles and in the form of materialistic particles rays (called by the challenger as **white matter**). The said white matter under specific conditions acts as energy. Universe is materialistic; no pocket in the space is with absolute nothing. Galaxies or the space is occupied by the **white matter** released by the stars, planets and other celestial bodies, which falsely has been understood by the Scientists as dark matter. World understands that gassy planets of the solar system generate more energy than they receive from the Sun. In fact the released energy is the materialistic particles curved rays similar to the materialistic particles curved rays released by the Nebula on its compactness. Gassy planet Jupiter generates (releases) materialistic particles curved rays in great quantum thus it spins the fastest among all the solar planets.

- During the period of compactness, in fact two factors simultaneously provide rotation to the Nebula; (i) Inward going matter due to its gravity to compress by encircling like black hole provides rotation by its inward or forward thrust and (ii) outgoing materialistic particles curved rays along with independent particles by their back thrust at every particle of the Nebula matter provides rotation.

As the contraction reaches towards its maturity, (though maturity of compactness never comes); magnitude of forward thrust to rotate by the encircling matter going inside keeps on reducing and on the other side rotation force magnitude by the outgoing materialistic particles curved rays along with independent particles keeps on increasing. See the sketch below:

<p>Ingoing matter by the contraction has been shown with the dotted curved lines whereas outgoing materialistic particles curved rays has been shown with normal curved lines.</p>	
	<p>Stage-1 of the collapsing Nebula</p> <p>Encircling and collapsing matter towards the centre provides greater rotation force than the rotation force magnitude provided by the outgoing materialistic particles curved rays</p>
	<p>Stage-2 of the collapsing Nebula</p> <p>Both the factors provide rotation force to the spherical matter with almost the same magnitude.</p>
	<p>Stage-3 of the collapsing Nebula</p> <p>Magnitude of rotation force to Nebula by the outgoing materialistic particles curved rays increases than the rotation force provided by the encircling ingoing matter.</p>
	<p>Stage-4 of the collapsing Nebula</p> <p>During the supposed last (4th) stage of compactness, rotation force provided by the ingoing encircling matter vanishes as compactness reaches to final stage and then only the outgoing materialistic particles curved rays provide rotation to the compacted body.</p>

Due to the above said facts stated and shown through the sketches, now no celestial spherical body is rotating by the conservation of angular momentum which it would have/had at its formation from the rotating Nebula.

Conclusion:

Rotation of the Sun (star):

Challenger has not peeped through the telescope. He has only computed some of the related new findings done by the Scientists in the past 400 years along with his own new ideas to get the results.

Reason stated above for the rotation of the Sun and the proofs (A, B, C, D and E) given by me over some phenomena related to the Sun leave no chance to disapprove my discovery claim (2007) over the reason behind rotation of the Sun or star.

Sun (star) rotates over its axis by the back thrust at its every particle from the Sun's outgoing materialistic spherical particles curved rays along with other solar ejects.

Acceptance of discovered fact would result to re-write the subjects 'Astronomy and Physics' and it would be the beginning of new era in Science.

See over the website much more newly discovered (understood) over the Sun, other than rotation of the Sun.

Next discovery claims to follow shortly:

Discovery claim:

Reason behind rotation of the Earth (planets) based over understood materialistic particle properties of the rays (World has wrong knowledge that the Earth/planet rotates by the conservation of angular momentum which it has got at its formation).

Discovery claim:

Reason behind slow rotation speed of the planets Mercury and Venus based over understood materialistic particle properties of the rays (World has wrong knowledge that slow rotation speed is due to tidal friction from the Sun or some impact may have resulted so).

Discovery claim:

Reason behind rotational directions of the planets and tilt to the axis' of the planets based over understood materialistic particle properties of the rays (World has wrong knowledge that tilt to the axis of the planets is due to some impact or collision in the past early history of solar system).

Discovery claim:

Reason behind orbital motion and orbital speed of the planets based over understood materialistic particle properties of the rays (World has wrong knowledge that the planets are orbiting due to the kinetic energy which they have got at their formation from the rotating solar Nebula).

Discovery claim:

And so on.....

Important to note:

Due to wrong knowledge till date with the concerned Scientists and Astronomers, the Students are being taught wrong resulting to set a cycle of wrong knowledge in the World.

Let us break the said cycle of wrong knowledge.

I have announced a monetary reward of Rs. 50 Lakhs or equivalent US dollars for whom, who would prove my claimed discovery over working mechanism of solar system based over understood materialistic particle properties of the rays as wrong and incorrect.

Discovery claim (2007) titled: MATERIALISTIC UNIVERSE

Discoverer/Challenger: Ramesh Varma (India)

Edited and confirmed by Deepak Varma (Australia)

Get a Reward[#] of ₹ 50 Lacs (Equivalent US Dollars)

by proving the discovery over working mechanism of solar system based over discovered and claimed true materialistic particle properties of the rays and true states of the matter as wrong and incorrect.

(If the Discoverer/Challenger had trillions of dollars with him, he would have announced a reward of billions of dollars instead of announcing a mere reward of Rupees fifty lacs or equivalent US dollars).

Reward claim can't be filed anywhere else, except under the Jurisdiction of Chandigarh (UT) India and for other terms and conditions see the website.

By not being able to prove his discovery claim as wrong; it is obvious that you have been taught wrong (Or you have wrong knowledge over the said phenomena or over the subjects Astronomy and Physics). In such case, to make the World aware of that what is correct; please support the Discoverer/Challenger (Ramesh Varma).

Discoverer and Challenger: Ramesh Varma (India)
